

# LUONTO

Luonto sofa sleepers are made using new high-quality materials. All products that we produce have to pass our quality control before they are shipped to the customers. In order to maintain your sofa in a perfect shape we recommend you take care of both foam and upholstery.

We only use clean and safe materials. The foam used in Luonto sofas is 2.2 density, high-resilient and cold cured. It is graded to keep its shape over 100,000 seats. The sofas require [moderate maintenance](#) to keep it looking as new. Since the foam is of high quality when first delivered it takes longer to take its original shape, causing the user to have to smooth out the surface of the sofa. The more the foam breaks in, the more it will bounce back.

The foam might also produce odor for the first few days of using the sofa. This is normal as the foam is new and was never used before. Typically, odor goes away after 4-6 weeks of usage. To speed up this process we recommend using water-based odor eliminators. Do not use any chemicals to keep the upholstery of the sofa safe. We also recommend opening the windows and using the fans near the furniture to help reduce the smell.

The foam we use in our furniture is CertiPUR® certified and is made to be safe. CertiPUR® is a voluntary testing, analysis, and certification program for the environmental, health and safety properties of polyurethane foam used in bedding and upholstered furniture applications. It specifies substances that may not be used in the production of polyurethane foams and sets stringent maximum limits for some components.

Foams that conform to CertiPUR® are notably certified to be made without:

- heavy metals, e.g. mercury, lead or cadmium
- dyes that are carcinogenic or allergenic as described by EU legislation
- phthalate plasticizers
- substances that cause cancer or may cause heritable genetic damage

They are also certified for low levels of VOC (volatile organic compound) emissions.

The back cushions are made of the same foam and require same care. The full leather back cushions are one-sided. They are made using breathable brown fabric on the back side which allows the airflow when you sit on the sofa.
